PROFESSIONAL SUMMARY

Fresh graduate in Informatics Engineering (GPA 3.91/4.00) with a background spanning both technology and hospitality/business operations — a combination that sharpens my ability to see the real problem a business needs solved, not just the code to solve it. I'm drawn to machine learning algorithms and building AI-driven engines, backed by strong analytical thinking developed through hands-on technical projects — from full-stack NLP systems (FastAPI, Next.js) that turn customer reviews into business decisions, to a CNN-based thoracic disease pre-detection tool built for the radiology industry. Years of direct customer service and operational experience taught me how to understand what customers actually need, and that judgment is what lets me choose and apply the right technology to solve it. On the operations side, I progressed from Crew Member to Operations Leader within four months managing daily outlet operations, inventory, and teams, and I currently lead business development and client strategy at a creative agency, translating client goals into technical execution plans. Seeking an AI Engineer or Software Developer role at a company that values continuous learning, where this blend of engineering skill, analytical thinking, and customer-centered judgment can grow alongside opportunities to develop new, related skills.

TECHNICAL SKILLS

Languages: Python, JavaScript, C++, C#, HTML, SQL

Mobile Development: Flutter, Dart, React Native (exposure)

Web & Backend: Next.js, TypeScript, FastAPI, Flask, REST API Design, Streamlit

Machine Learning / NLP: Scikit-learn, NLTK, spaCy, VADER, TextBlob, Naive Bayes, SVM, CNN (applied)

Data: Data Mining, Web Scraping, Pandas, SQLite

Business Applications: Microsoft Office (Word, Excel, PowerPoint), Odoo ERP

Engineering & Tools: Git, Linux (basic), System Design, Black Box & White Box Testing, UAT

SOFT SKILLS

Analytical & Problem-Solving Thinking, Client Relationship Management, Business Development, Team Leadership, Cross-Functional Communication, Adaptability, Time Management, Attention to Detail, Customer-Centered Judgment

FEATURED PROJECTS

SentimenAI — Review Sentiment Intelligence Platform

2025 – 2026

Undergraduate Thesis Project

- Full-stack NLP system that classifies Google Review and e-commerce customer feedback using Naive Bayes and SVM algorithms, helping SMEs and companies turn raw reviews into operational decisions and customer-satisfaction strategy.
- Built on an 11-endpoint FastAPI REST API with a Next.js 14 analytics dashboard and SQLite storage; validated through Black Box, White Box, and User Acceptance Testing.
- GitHub: github.com/Arsyaf12/skripsi-sentiment-arsya

SentiSight — NLP-Based Customer Sentiment Analysis System

2026

Freelance Client Project — Nationally Presented Research

- A separate NLP sentiment-classification system built independently for freelance business clients to support service-quality and customer-experience decisions — distinct from the SentimenAI thesis platform in architecture, dataset, and use case.
- Presented at Seminar Nasional SeNTIK STI&K 2026 (“Dasawarsa: Satu Dekade Kontribusi dalam Pengembangan Teknologi Informasi, AI, dan Sains Data di Indonesia”), a national seminar held in collaboration between STMIK Jakarta STI&K and Universitas Cendekia Abditama — Aug 29, 2026.

ToraksAI — Thoracic Disease Pre-Detection System

2026

Independent Project

- Clinical decision-support web application for the radiology industry that pre-screens chest X-rays for thoracic conditions using a CNN-based detection model, with explainable AI visualization to support medical decision-making.
- GitHub: github.com/Arsyaft12/toraksai

BEASTINDEX — Fitness Scoring & Analytics Platform

2026

Independent Project

- Full-stack web application that scores a user's strength, speed, and endurance against real, measured population data — OpenPowerlifting (2.3M+ competitive lifting records), NHANES general-population health data, and NYC Marathon 2025 results — instead of invented benchmarks.
- Engineered the scoring pipeline (percentile ranking, DOTS normalization, Riegel race-equivalence conversion) and built the product on Next.js 16, TypeScript, and Tailwind CSS, replacing placeholder formulas with dataset-backed statistics end-to-end.

PROFESSIONAL EXPERIENCE

Freelance IT & Software Developer

Jan 2023 – Present

Self-Employed — Remote, Indonesia

- Delivered end-to-end software solutions for clients across healthcare, social media, and warehouse/inventory management, owning the process from requirements and design logic through development, deployment, and handover.
- Built mobile and web applications using Flutter, Python, JavaScript, and Next.js, integrating REST APIs and deploying projects to production on Vercel.
- Maintain an active interest in applied AI, end-to-end software business models, and system architecture, continually exploring new tools and approaches outside of client work.

Business Development & Creative Lead

Nov 2025 – Present

The Pitch Creative Agency — Tangerang, Banten

- Translate client goals into technical requirements and execution plans, bridging business needs with delivery timelines across creative and digital projects.
- Built and maintained client relationships through consultative pitching, converting 3–5 new clients via end-to-end proposal development and onboarding.

Operations Leader

Jul 2022 – Apr 2025

PT. Foresthree Waralaba Indonesia — Kab. Tangerang, Banten

- Promoted from Crew Member to Operations Leader within four months based on strong performance and leadership potential.
- Managed daily operations, inventory, scheduling, and SOP compliance for a high-volume outlet; redesigned onboarding and training, improving staff retention and productivity.
- Maintained financial and operational reporting with an error rate below 2%.

Food & Beverage Service Attendant

Jul 2020 – Feb 2022

Hotel Santika Premiere ICE BSD — part of Santika Indonesia Hotels & Resorts (Kompas Gramedia Media Company), Kab. Tangerang, Banten

- Progressed from Industrial Trainee to Daily-Rate Crew within the Food & Beverage Service Department; delivered service for 300+ guests daily and banquet events of up to 500 guests.
- Formally evaluated 3.41/4.00 (“Good”) by the F&B Manager across 12 performance indicators including dependability, adaptability, and growth potential.

EDUCATION

S1 Teknik Informatika (Bachelor of Informatics Engineering)

2022 – 2026

Universitas Cendekia Abditama, Tangerang

- GPA: 3.80 / 4.00
- Relevant coursework: Data Mining, Artificial Intelligence, Software Engineering, Statistics & Probability, Management Information Systems, Cyber Security, Wireless/Mobile Computing

SMK — Perhotelan (Vocational High School, Hospitality Management)

2019 – 2022

SMK Negeri 7 Kabupaten Tangerang

- Average Score: 83.54 — Graduated with Distinction

CERTIFICATIONS & TRAINING

- Certificate of Competence — English for Professional/Office Communication, issued by BNSP, Indonesia's National Professional Certification Authority | Jun 2025 – Jun 2028
- Certificate of Participation — Seminar Nasional SeNTIK STI&K 2026, “Dasawarsa: Satu Dekade Kontribusi dalam Pengembangan Teknologi Informasi, AI, dan Sains Data di Indonesia”; presented the SentiSight research project; collaboration between STMIK Jakarta STI&K and Universitas Cendekia Abditama | Aug 2026
- Basic First Aid Certificate, issued by Palang Merah Indonesia (Indonesian Red Cross) | Jan 2025 – Jan 2027
- Basic Leadership & Discipline Training Program, conducted with the Indonesian Army Regional Command (Rindam Jaya) | Oct 2023

ADDITIONAL INFORMATION

- Project distinction: SentimenAI (academic thesis platform, e-commerce/Google Review focus) and SentiSight (freelance client system, nationally presented at SeNTIK STI&K 2026) are two separate NLP sentiment-analysis builds developed for different contexts and audiences.
- Contributed brand and content strategy work — short-form social campaigns (Instagram/TikTok) for clients including The Pitch Creative, Foresthree Coffee, and Prodia — bridging brand storytelling with measurable audience engagement.
- Full portfolio, project write-ups, and code samples available at portfolio-arsya.vercel.app and github.com/Arsyaft12
